Ontologies in Urban Development Projects Gilles Falquet, Claudine Métral, Jacques Teller, Christopher Tweed, 2011-07-29

Ontologies are increasingly recognized as essential tools in information science. Although the concepts are well understood theoretically, the practical implementation of ontologies remains challenging. In this book, researchers in computer science, information systems, ontology engineering, urban planning and design, civil and building engineering, and architecture present an interdisciplinary study of ontology engineering and its application in urban development projects. The first part of the book introduces the general notion of ontology, describing variations in abstraction level, coverage, and formality. It also discusses the use of ontologies to achieve interoperability, and to represent multiple points of view and multilingualism. This is illustrated with examples from the urban domain. The second part is specific to urban development. It covers spatial and geographical knowledge representation, the creation of urban ontologies from various knowledge sources, the interconnection of urban models and the interaction between standards and domain models. The third part presents case studies of the development of ontologies for urban mobility, urban morphological processes, road systems, and cultural heritage. Other cases report on the use of ontologies to solve urban development problems, in construction business models, building regulations and urban regeneration. It concludes with a discussion of key challenges for the future deployment of ontologies in this domain. This book bridges the gap between urban practitioners and computer scientists. As the essence of most urban projects lies in making connections between worldviews, ontology development has an important role to play, in promoting interoperability between data sources, both formal (urban databases, Building Integrated Models, Geographical Information Systems etc.) and less formal (thesauri, text records, web sources etc.). This volume offers a comprehensive introduction to ontology engineering for urban development. It is essential reading for practitioners and ontology designers working in urban development.

Statistical Learning and Language Acquisition Patrick Rebuschat, John N. Williams, 2012-10-01 Open publication This volume brings together contributors from cognitive psychology, theoretical and applied linguistics, as well as computer

science, in order to assess the progress made in statistical learning research and to determine future directions. An important objective is to critically examine the role of statistical learning in language acquisition. While most contributors agree that statistical learning plays a central role in language acquisition, they have differing views. This book will promote the development of the field by fostering discussion and collaborations across disciplinary boundaries.

Morphosyntactic Development in Child Emirati Arabic Dimitrios Ntelitheos, 2024-09-23 This book investigates selected aspects of the grammatical development of Emirati Arabic, the variety of Gulf Arabic spoken in the United Arab Emirates and closely related to the varieties spoken in the rest of the Gulf States. While the acquisition of Arabic as a second language has been widely studied, first language acquisition of different Arabic dialects has received much less attention. Ntelitheos addresses this disparity by presenting a number of systematic studies on the acquisition of Emirati Arabic grammar based on a two-year longitudinal corpus of six children. He discusses the acquisition of the nominal domain, including definiteness and possession; the acquisition of verbal functional structure and agreement; and the acquisition of word order and negation in the syntactic domain. In addition, he defines several developmental stages for Emirati Arabic, based on established diagnostic tests. The discussion is framed within a general survey of the relevant literature in Arabic acquisition studies and combines new empirical data with rigorous discussion of several long-standing theoretical problems in the broader field of child language development.

The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark, comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries, from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy; Psychology; Neurosciences; Computational Intelligence; Linguistics and Language; and Culture, Cognition, and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

Frequency and the Emergence of Linguistic Structure Joan L. Bybee, Paul Hopper, 2001-01-01 A mainstay of functional linguistics has been the claim that linguistic elements and patterns that are frequently used in discourse become conventionalized as grammar. This book addresses the two issues that are basic to this claim: first, the question of what

types of elements are frequently used in discourse and second, the question of how frequency of use affects cognitive representations. Reporting on evidence from natural conversation, diachronic change, variability, child language acquisition and psycholinguistic experimentation the original articles in this book support two major principles. First, the content of people's interactions consists of a preponderance of subjective, evaluative statements, dominated by the use of pronouns, copulas and intransitive clauses. Second, the frequency with which certain items and strings of items are used has a profound influence on the way language is broken up into chunks in memory storage, the way such chunks are related to other stored material and the ease with which they are accessed to produce new utterances.

Input-based Phonological Acquisition Tania Zamuner, 2004-11-23 This book provides an analysis of two theories of language acquisition: the theory that acquisition is primarily mediated by innate properties of language provided by universal grammar, and the opposing theory that language is acquired based on the patterns in the ambient language. A problem not often considered is that these two theories are confounded because the structures that are frequent across languages are also typically the most frequent within a specific language. In addition, the innate theory of language acquisition is difficult to quantify and qualify. Using cross-linguistic, corpus and experimental approaches, this book attempts to contrast these theories through an examination of the acquisition of word-final consonants in English.

The Oxford Handbook of Language Production Matthew Goldrick, Victor Ferreira, Michele Miozzo, 2014-04-11 The Oxford Handbook of Language Production provides a comprehensive, multidisciplinary review of the complex mechanisms involved in language production. It describes what we know of the computational, linguistic, cognitive, and brain bases of human language production - from how we conceive the messages we aim to convey, to how we retrieve the right (and sometimes wrong) words, how we form grammatical sentences, and how we assemble and articulate individual sounds, letters, and gestures. Contributions from leading psycholinguists, linguists, and neuroscientists offer readers a broad perspective on the latest research, highlighting key investigations into core aspects of human language processing. The Handbook is organized into three sections: speaking, written and sign languages, and how language production interfaces with the wider cognitive system, including control processes, memory, non-linguistic gestures, and the perceptual system. These chapters discuss a wide array of levels of representation, from sentences to individual words, speech sounds and articulatory gestures, extending to discourse and the broader social context of speaking. Detailed supporting chapters provide an overview of key issues in linguistic structure at each level of representation. Authoritative yet concisely written, the volume will be of interest to scholars and students working in cognitive psychology, psycholinguistics, cognitive neuroscience, computer science, audiology, and education, and related fields.

Variation, Change and Phonological Theory Frans Hinskens, Roeland van Hout, Leo Wetzels, 1997 There is a growing awareness that a fruitful cooperation between the (diachronic and synchronic) study of language variation and change and work in phonological theory is both possible and desirable. The study of language variation and change would benefit from this kind of cooperation on the conceptual and theoretical levels. Phonological theory may well profit from a greater use of what is commonly called 'external evidence'. This volume contains contributions by outstanding representatives from the more data-oriented fields and phonological theory. They discuss possibilities and problems for a further integration of both areas, by considering questions such as where and to which extent the two may need each other, and whether there is a need for an interdisciplinary conceptual framework and methodology. Attention is also paid to questions regarding the cause and actuation, linguistic constraints and the internal spread of linguistic change, as well as to possible and impossible processes of language change.

Space, people and technology Amira Osman, Geci Karuri-Sebina, 2023-08-25 In this book, there is a call on built environment professionals to reflect on the role of narrative in shaping space, influencing people and making decisions about technology. It is argued that by changing the narrative and methods of representations, new imaginaries can be generated and the scope of what is possible is significantly broadened. Contextualized narratives, vocabularies and metaphors can evoke new thinking and new practice. This book looks for examples where professionals and communities have jointly worked together from the precinct to the site level. The authors are especially inspired by the ideas of 'tinkering', 'muddling through', 'engaging with the mess' and 'gnarly planning', concepts that encourage experimentation and engagement with real-life contexts, learning through doing, policy change through evolutionary processes and a hands-on approach. This book aims to elevate our understanding of the concepts of people-centred participation and co-production/co-creation by shifting the debate from the esoteric to the applied and contextual. We believe that practice can only be transformed by transforming thinking. Through the development of our own philosophies, emerging from and rooted in context, we may shift thinking and practice towards people, community and care.
