Introduction to Probability Joseph K. Blitzstein, Jessica Hwang, 2014-07-24 Developed from celebrated Harvard statistics lectures, Introduction to Probability provides essential language and tools for understanding statistics, randomness, and uncertainty. The book explores a wide variety of applications and examples, ranging from coincidences and paradoxes to Google PageRank and Markov chain Monte Carlo (MCMC). Additional application areas explored include genetics, medicine, computer science, and information theory. The print book version includes a code that provides free access to an eBook version. The authors present the material in an accessible style and motivate concepts using real-world examples. Throughout, they use stories to uncover connections between the fundamental distributions in statistics and conditioning to reduce complicated problems to manageable pieces. The book includes many intuitive explanations, diagrams, and practice problems. Each chapter ends with a section showing how to perform relevant simulations and calculations in R, a free statistical software environment.

Serious Games and Edutainment Applications Minhua Ma, Andreas Oikonomou, Lakhmi C Jain, 2011-12-09 The recent re-emergence of serious games as a branch of video games and as a promising frontier of education has introduced the concept of games designed for a serious purpose other than pure entertainment. To date the major applications of serious games include education and training, engineering, medicine and healthcare, military applications, city planning, production, crisis response, to name just a few. If utilised alongside, or combined with conventional training and educational approaches, serious games could provide a more powerful means of knowledge transfer in almost every application domain. Serious Games and Edutainment Applications offers an insightful introduction to the development and applications of games technologies in educational settings. It includes cutting-edge academic research and industry updates that will inform readers of current and future advances in the area. The book is suitable for both researchers and educators who are interested in using games for educational purposes, as well as game professionals requiring a thorough understanding of issues involved in the application of video games technology into educational settings. It is also applicable to programmers, game artists, and management contemplating or involved in the development of serious games for educational or training

purposes.

Educational Leaders Without Borders Rosemary Papa,Fenwick W. English,2015-06-23 Building from the history of inequality in education up to current problems, this text posits viewpoints on how to cultivate humanistic leaders in education to best benefit underserved children around the world. Learning to be a Person in Society Peter Jarvis,2012-06-25 Learning is a lifelong process and we are the result of our own learning. But how exactly do we learn to be a person through living? In this book, Peter Jarvis draws together all the aspects of becoming a person into the framework of learning. Considering the ongoing, nature versus nurture debate over how we

become people, Jarvis's study of nurture - what learning is primarily about - builds on a detailed recognition of our genetic inheritance and evolutionary reality. It demonstrates the ways in which we become social human beings: internalising, accommodating and rejecting the culture to which we are exposed (both primarily and through electronic mediation) while growing and developing as human beings and people. As learning theory moves away from traditional, single-discipline approaches it is possible to place the person at the centre of all thinking about learning, by emphasising a multi-disciplinary approach. This wide-ranging study draws on established research from a number of disciplines into the complexities that make us who we are. It will appeal to a wide variety of audiences: those involved in all fields of education, the study of learning and development, human resource development, psychology, theology and the caring professions.
